EDUCATION

The University of Florida, Gainesville, FL

12 / 2023

Bachelor of Science in Computer Science

Relevant Coursework: Data Structures & Algorithms; Operating Systems; Information & Database Systems

SKILLS

Technical Skills: AWS EC2; NextJS; ReactJS; NodeJS; PostgreSQL; Django; Linux; pthreads

Languages: Javascript; Python, Typescript; Java; HTML; CSS; C; C++; C#; SQL; Matlab

EXPERIENCE

Full Stack Engineer (Contract), West Palm Beach, FL

12 / 2023 - Present

Independent

- Shipped 3 production applications end-to-end — from database schema to cloud deployment — including an AI music generation SaaS and a blackjack card counting trainer with real-time session persistence
- Optimized application performance through server actions, lazy loading, and backend query tuning — reducing page load times and client-side JavaScript bundle size
- Built and deployed a full-stack web application for a local delivery business, integrating Stripe for payments and Resend for automated email communication

Insurance Sales Specialist, West Palm Beach, FL

05 / 2023 - 06 / 2026

Highland Health Direct

- Managed a high-volume pipeline of inbound and outbound client consultations, translating complex insurance options into clear, actionable recommendations
- Built long-term client relationships through consistent follow-ups, needs assessment, and issue resolution, supporting sustained customer retention
- Consistently met and exceeded sales targets through consultative selling, objection handling, and deep product knowledge in a commission-driven environment

Research Assistant, Gainesville, FL

11 / 2020 - 06 / 2021

Auditory Computation and Psychosis Lab at the UF Health Shands Hospital

- Trained a neural network used for audio extraction in noisy environments, improving signal clarity through model tuning and evaluation in MATLAB
- Developed an audio-to-haptic feedback algorithm that translated denoised audio signals into vibration patterns using an Arduino Uno

PROJECTS

HTTP Server in C | <https://github.com/mLeo19/http-server>

05 / 2026

- Built a production HTTP/1.1 server from raw TCP sockets in C with zero external dependencies - implements HTTP parsing, routing, static file serving, and a REST API
- Engineered a thread pool with 8 concurrent pthreads handling 11,094 requests per second on AWS EC2, with mutex-protected handlers, graceful shutdown, and path traversal protection

Soft 17 - Blackjack Card Counting Trainer | <https://blackjack-counting-omega.vercel.app/>

04 / 2026

- Built a production-ready blackjack trainer with a full game engine (hit, stand, double, split, surrender, insurance), Hi-Lo card counting with real-time true count tracking, and a train mode with basic strategy hints and lifetime strategy accuracy stats
- Engineered persistent session management using Supabase PostgreSQL, serializing full shoe state as JSONB so players resume exactly where they left off

AI Music Generator | <https://music-generator-frontend-beta.vercel.app/>

01 / 2026

- Built an AI-powered music generation platform where users generate original audio from text prompts using ACE-Step deployed on Modal GPU infrastructure for scalable inference
- Implemented full-stack architecture with Next.js and Python backend, using Prisma ORM with Neon Postgres for data persistence and user request tracking
