EDUCATION

The University of Florida, Gainesville, FL

12 / 2023

Bachelor of Science in Computer Science

Relevant Coursework: Data Structures & Algorithms; Operating Systems; Information & Database Systems

SKILLS

Technical Skills: AWS EC2; NextJS; ReactJS; NodeJS; PostgreSQL; Django; Linux; pthreads

Languages: Javascript; Python, Typescript; Java; HTML; CSS; C; C++; C#; SQL; Matlab

EXPERIENCE

Freelance Software Engineer / Independent Developer, West Palm Beach, FL

12 / 2023 - Present

- Designed, developed, and deployed **full-stack applications** using **Next.js 14, TypeScript, React, Node.js, and PostgreSQL**
- Built production software for clients and independent products, including an **AI-powered music generation SAAS** and a **blackjack card counting trainer** with real-time session persistence
- Improved performance through **server actions, lazy loading, and backend optimizations**, reducing client-side Javascript and page load times
- Integrated third-party APIs (payments, email automation, analytics) to support real-world business workflows

Highland Healthcare, West Palm Beach, FL

05 / 2023 - Present

Insurance Sales Agent

- Managed a high-volume pipeline of inbound and outbound client consultations, translating complex insurance options into clear, actionable recommendations
- Built long-term client relationships through consistent follow-ups, needs assessment, and issue resolution, supporting sustained customer retention
- Developed strong communication, negotiation, and problem-solving skills while working in a performance-driven environment

Auditory Computation and Psychosis Lab at the UF Health Shands Hospital, Gainesville, FL

11 / 2020 - 06 / 2021

Research Assistant

- Trained a **neural network used for audio extraction in noisy environments**, improving signal clarity through model tuning and evaluation in MATLAB
- Developed an **audio-to-haptic feedback algorithm** that translated denoised audio signals into vibration patterns using an Arduino Uno

PROJECTS

HTTP Server in C | <https://github.com/mLeo19/http-server>

05 / 2026

- Built a production HTTP/1.1 server from raw TCP sockets in C with zero external dependencies - implements HTTP parsing, routing, static file serving, and a REST API
- Engineered a thread pool with 8 concurrent pthreads handling 11,094 requests per second on AWS EC2, with mutex-protected handlers, graceful shutdown, and path traversal protection

Soft 17 - Blackjack Card Counting Trainer | <https://blackjack-counting-omega.vercel.app/>

04 / 2026

- Built a production-ready blackjack trainer with a full game engine (hit, stand, double, split, surrender, insurance), Hi-Lo card counting with real-time true count tracking, and a train mode with basic strategy hints and lifetime strategy accuracy stats
- Engineered persistent session management using Supabase PostgreSQL, serializing full shoe state as JSONB so players resume exactly where they left off

AI Music Generator | <https://music-generator-frontend-beta.vercel.app/>

01 / 2026

- Built an AI-powered music generation platform where users generate original audio from text prompts using ACE-Step deployed on Modal GPU infrastructure for scalable inference
- Implemented full-stack architecture with Next.js and Python backend, using Prisma ORM with Neon Postgres for data persistence and user request tracking
